AVERTIUM

CORPORATE OVERVIEW

A SMARTER, STRONGER APPROACH TO CYBERSECURITY

Keeping pace with malware, phishing, ransomware and other cyber threats is complex, challenging and resource-intensive. You are responsible for safeguarding against all cyber adversaries, yet it only takes one vulnerability for an attack to be successful.

We can help.

Leveraging industry-leading NIST CSF and the MITRE ATT&CK framework, we work collaboratively with clients to develop action plans that balance the maturity of their security program against goals, risk thresholds and impacts. The result: More relevant solutions that not only bulk up the cybersecurity program but also propel clients forward in their security journey.

THE AVERTIUM ADVANTAGE

- **More rigor** - with capabilities in every cybersecurity specialty, plus the commitment to work closely with every single client
- **More relevance** - by going beyond “check-the-box” to true best practices customized to your environment
- **More responsiveness** - from well-qualified professionals who act faster because they make it their business to know your business

ABOUT AVERTIUM

Avertium is one of the largest cybersecurity services providers serving mid-market-to-enterprise organizations. Forged out of three award-winning cybersecurity companies, Avertium brings enterprise-level security to the many mid-sized and larger organizations that don't have access to comprehensive, specialized protection. More than 1,200 organizations in industries ranging from financial services and manufacturing, to technology and healthcare benefit from Avertium's managed security, consulting and compliance services delivered with more rigor, more relevance, and more responsiveness. The company's CyberOps Centers of Excellence are located in Arizona and Tennessee.
