AVERTIUM

VULNERABILITY MANAGEMENT AS A SERVICE

RELEVANCE OF AN ASSESSMENT, RIGOR OF A PROGRAM

The constant battle to thwart cyberattacks has proven organizations must take a more structured approach to security, applying discipline to proactively assess and address risk.

Vulnerability management is an integral component of a rigorous governance, risk and compliance (GRC) strategy. A superset of vulnerability assessments, vulnerability management goes above and beyond standalone analysis to provide deeper understanding and control over enterprise security risks and ensures consistent attention to and prioritization of addressing weaknesses in the environment to facilitate remediation.

Many organizations face challenges in strategizing, configuring and implementing such a program.

Avertium can help.

VULNERABILITY MANAGEMENT AS A SERVICE

Avertium's vulnerability management as a service (VMaaS) provides clarity and purpose through continuous monitoring for a data-driven approach to identify, understand, prioritize and act against vulnerabilities, effectively closing the window of opportunity for damaging attacks.

Avertium combines best-in-class tools with proven expertise to facilitate an organized and deliberate approach.
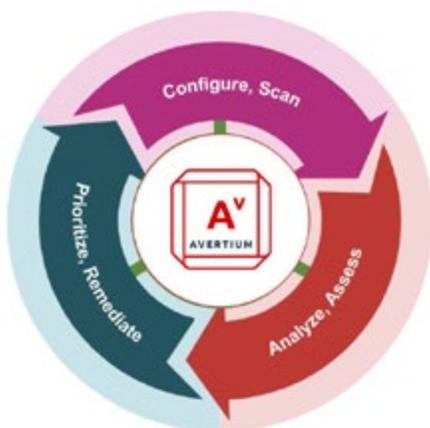

>> Architect, implement and manage a robust scanning platform

>> Conduct regular comprehensive network scans and system audits with expert analysis

>> Identify and categorize relevant assets ranked according to risk value

>> Identify potential vulnerabilities and prioritize remediation and mitigation

>> Encompass network devices, endpoints, servers, databases and other assets in on-premises, cloud and work-from-home environments.

THE AVERTIUM ADVANTAGE

Avertium works alongside you to inject more rigor, more relevance and more responsiveness into your vulnerability management program and to bulk up your overall security posture:

» Weekly, monthly, or quarterly scanning cadence appropriate to your needs

» Internal and/or external IP scanning

» Security Posture GPA assigned to measure your performance against your peers

» Device criticality and weighting to assist meaningful prioritization

» Interactive dashboard for easily consumed insight and quick determination if ad-hoc scans are in order

» Optional remediation services available

ACTIONABLE INTELLIGENCE

▪ Reports with expert analysis and prioritization based on organization needs

▪ Regular review with context provided by your dedicated technical account manager (TAM)

COMPLEMENTARY SERVICES

VMaaS is a crucial component of a well-governed risk-based cybersecurity approach. As the leading provider of accessible managed security and consulting services to the midmarket and enterprise, Avertium offers a comprehensive array of solutions that contribute to a mature security posture:

▪ Extended Detection and Response (XDR)

▪ Managed Security Services

▪ Remediation Support Services

▪ Penetration Testing

▪ Zero Trust Network Services

▪ Compliance Consulting (NIST, HIPAA, PCI, SOC 2, etc.)

ABOUT AVERTIUM

Avertium brings enterprise-level security to mid-sized and larger organizations challenged by the cybersecurity talent shortage, rapidly evolving threat landscape and budgetary constraints. The company's acclaimed show-no-weakness approach to extended detection and response (XDR), governance and compliance, and strategic advisory services is redefining the managed security services category. From financial services and manufacturing, to technology and healthcare, more than 2,500 companies rely on Avertium's more rigorous, more relevant, and more responsive delivery of cybersecurity services. Backed by growth equity firm Sunstone Partners, Avertium operates CyberOps Centers of Excellence in Arizona, Colorado, and Tennessee. Avertium. Show No Weakness.®
